The American Institute of Physics was founded in 1931. It is chartered as a membership corporation with leading societies in the fields of physics and astronomy as members. The Institute combines into one operating agency those functions which can best be done by the societies jointly. Its purpose is the advancement and diffusion of the knowledge of physics and its application to human welfare.

The Institute publishes scientific journals; provides abstracting and indexing services; serves the public by making available to the press and other channels of public information reliable communications on physics and astronomy and their progress; carries on extensive manpower activities; maintains projects directed toward providing information about physics and astronomy education to students, teachers, and academic departments; encourages and assists in the documentation and study of the history and philosophy of recent physics; cooperates with local, national, and international organizations devoted to physics and related sciences; and fosters the relations of the science of physics to other sciences and to the arts and industries.
